

Megapoxy®

Plain sailing: Strong, stunning, seamless solution for boat showroom

Client: Manly Flooring (contractor)

Location: Mona Vale, New South Wales

PROJECT SNAPSHOT

Replace the existing worn-out floor coating with new, high-performance sealer and coating – for a stunning result that lasts.

Client needs + challenges

- Excellent wear resistance and quick, easy maintenance.
- A finish that withstands the weight of boats, impact of tyres, frequent movement, and effects of fuel, oil, and chemical spills.
- A professional, stylish finish that endures – to best showcase the quality of boats.
- Fast turnaround to get back to business.

- [Megapoxy Thinners >](#)

Solutions, service + simplicity

We partnered with Manly Flooring to recommend the best solutions to revitalise the existing showroom floor. We provided ongoing advice to support a swift and seamless process.

- The team removed the floor's existing polyester resin and epoxy coating – grinding it back to a fresh concrete surface.
- They sealed and strengthened the floor with one coat of Megapoxy LVS – a penetrating sealer that protects against oils, fats, dilute acids, ammonium nitrate and other corrosive materials that can damage concrete.
- Once cured, they applied three coats of Megapoxy MC – a maintenance coating known for its heavy-duty durability and resistance to chemicals, impacts and scrapes – in high-gloss, timeless and elegant grey.
- The first two coats were each mixed with a careful ratio of Megapoxy Thinners for easy working – with the third coat being applied with no thinners, giving a thicker coating with incredible strength.

Application of Megapoxy LVS

Standout benefits

- Floor was trafficable in just 24 hours after application.
- Premeasured kits (in correct proportions for immediate use) provided extra efficiency, ease and confidence.
- Simple upkeep and incredible durability in demanding environment.
