## Groundswell of confidence: Ultra-reliable grouting for mining machinery

**Project Owner:** Appin East Colliery mine

**Contractor | Project Manager:**  
Winder Controls (now SIEMAG  
TECBERG Australia)

**Industry:** Mining

**Location:** New South Wales

### PROJECT SNAPSHOT

Grout and anchor a cable winder – with approximately one kilometre of cable wound onto it – that is used for lowering a carriage that transports miners into the coal mine.

### Client needs + challenges

- Heavy-duty grouting solution for industrial machinery.
- High vibration resistance.
- Exceptional strength.
- Fast cure rates to minimise shutdown times.
- Ease of use and highly flowable.
- Total confidence and reliability.

## PRODUCTS USED

- Megapoxy 206 Ultra

### Solutions, service + simplicity

Megapoxy 206 Ultra was chosen by the project manager for the crucial work. Our technical specialists offered support during the grouting process.

Megapoxy 206 Ultra is our heavy-duty grout, designed specifically for civil engineering and structural applications where maximum strength is essential. Solvent-free with excellent flow, it has superior compressive strength & impact resistance.

To apply the solution, the team levelled the cable winder and placed formwork around its sole plates. They then poured Megapoxy 206 Ultra into the formwork and allowed it to cure.

### Standout benefits

- Heavy-duty performance and reliability.
- A stronger, safer grouting solution.
- Incredible durability and resistance – to minimise maintenance costs and downtime.
- Swift, simple mixing and application.
