## Back on the high seas: premium kitchen flooring made to last

**Client:** Captain Cook Cruises NSW

**Location:** South Australia

### PROJECT SNAPSHOT

Remove the vinyl flooring and update the coating for the steel kitchen floor of a leading cruise operator – with epoxy resin chosen for its durability and movement tolerance. The kitchen services lunch and dinner cruises of Sydney Harbour and surrounding waterways.

### Client needs + challenges

- Most hygienic surface for food preparation.
- Longer-lasting, non-slip flooring for a bustling kitchen.
- Easy to keep clean.
- Movement tolerance for a boat that flexes and moves during cruising.
- Aesthetics to complement the high-quality brand and experience promised.
- Fast turnaround to return to business quickly.

## PRODUCTS USED

- [Megapoxy MC2 >](#)

## Solutions, service + simplicity

We worked with the Captain Cook Cruises team to pinpoint the right solution and minimise downtime during application. As a well-known and reputable cruise operator, we wanted to ensure they could resume service swiftly.

- Applying a coat of Megapoxy LVS – a penetration sealer for concrete, brick and other porous surfaces.
- While protecting and waterproofing the products, Megapoxy LVS also highlights any existing surface defects (eg small cracks) on curing – which can be filled with Megabond, our high-strength, 100% solids epoxy adhesive for ceramic floor tiling.
- Simple and fast, Megabond provides a smoother surface, outstanding chemical resistance and amazing strength.
- Finally, three coats of Megapoxy MC are applied in contrasting colours to visually confirm full coverage.

## Standout benefits

- Safer, non-slip flooring for a unique ‘moving’ kitchen.
- A hygienic, chemical-resistant, food-grade protective barrier for real confidence.
- Simple maintenance and incredible durability in a busy environment.
