

Megapoxy[®]

Breath of fresh air:
high-gloss, ultra-
durable floor coating
for aircraft hanger

Project owner: Qantas

Contractor: Griffiths

Location: Adelaide, South Australia

PROJECT SNAPSHOT

Revitalise the floor of the Qantas Hangar at Adelaide Airport – with a new high-gloss, high-performance epoxy coating to meet the demands of the aviation environment.

Client needs + challenges

- Dust-free, high-strength coating.
- Durability to withstand heavy traffic and aircraft movement.
- Simple application by roller.
- Highly effective protection against damaging materials, including aviation fluid.
- Long-life, low-maintenance finish.
- Timeless, clean, professional look.

Solutions, service + simplicity

The project contractor chose Megapoxy solutions and we were delighted to provide support and technical advice throughout the project.

- The team removed all existing resin floor coatings and prepared the floor.
- They then applied one coat of Megapoxy LVS, a highly protective penetration sealer that extends longevity of surfaces.
- The following day, one coat of Megapoxy H Grey was applied, mixed with 10% Megapoxy thinners. After curing overnight, a second coat of Megapoxy H was applied without thinners.

Standout benefits

- High-quality, durable floor to reduce future maintenance costs and downtime.
- Simple step-by-step mix and application.
- Stylish, smooth finish with strength to match.
